STIEM Bongaya

Profession public accountant (Auditor) is a profession of public trust. Public confidence in the quality of public accounting services would be higher, if the profession is to apply high quality standards for the implementation of professional work carried out by members of the profession. This study aims to determine whether the auditor independence affect the satisfaction of government auditors BPK Representative of South Sulawesi province. Collecting the data using primary data obtained through questionnaires. The population is the auditors of BPK Representative of South Sulawesi province. The study used sampling techniques, saturated. Data analysis was done by using simple regression techniques. The results showed that the hypothesis is accepted because the test results were positive and significant on hypotheses. The influence that arises is positive. This means that increasing the independence of auditors will be followed by an increase of in job satisfaction of auditor, conversely decrease auditor's independence that would be followed by a decrease in job satisfaction. This study is limited to the object of research. Researchers only research on auditors working in BPK RI Representative of South Sulawesi province alone, so it is possible the existence of differences in the results, discussion or research conclusions for different objects.
